Deductive prerequisite path
Empirical feedback constraint
Ch 1: Spectral Questions
Anomalies & model distance
Quantum shape & 6-region anchors
Ch 2: Microscopic Shape
ESPE, shell evolution & pairing
Deformation coordinates & algebra
Ch 4: Cross-Region Probes
Six-region comparative tests
Isomers, weak decay & reactions
Ch 3: Triaxial Excitations
Rotational limits & wobbling
Chirality & gamma-vibration
Ch 5: In-Beam Gamma DAQ
Pulse shaping & CFD timing
Coincidence, DCO, tau & statistics
