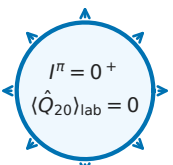
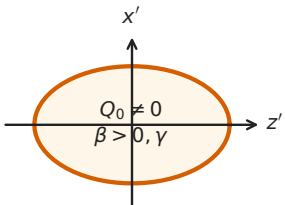
(a) Laboratory Frame ($I = 0$)



Quantum orientation singlet
(NOT time-averaged smear)

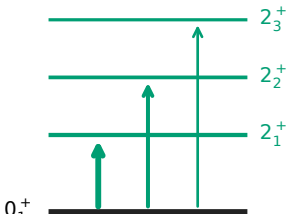
(b) Intrinsic Frame



Body-fixed deformation
(SO(3) symmetry broken)

(c) Invariant $q_2 \geq 0$ Network

$$q_2 = \sum_n B(E2; 0_1^+ \to 2_n^+) \geq 0$$



Scalar quadrupole correlation
(Includes zero-point & self-terms;
does not alone prove rigid shape)
