Chosen analytic event model; N = 10000 physical events; no experimental data
a
Pair count and event count
Event reuse
Independent pairs (assumed)
All-partner limit
Standard deviation of mixed mean
10^{-2}
10^{-3}
10^{-4}
10^{0}
10^{1}
10^{2}
10^{3}
10^{4}
Distinct partners per trigger, K
b
Propagation to the ratio
Full prompt / mixed Cov
Zero cross Cov (assumed)
Fixed mixed denominator
Delta standard uncertainty of ratio
0.016
0.015
0.014
0.013
0.012
0.011
0.010
10^{0}
10^{1}
10^{2}
10^{3}
10^{4}
Distinct partners per trigger, K
