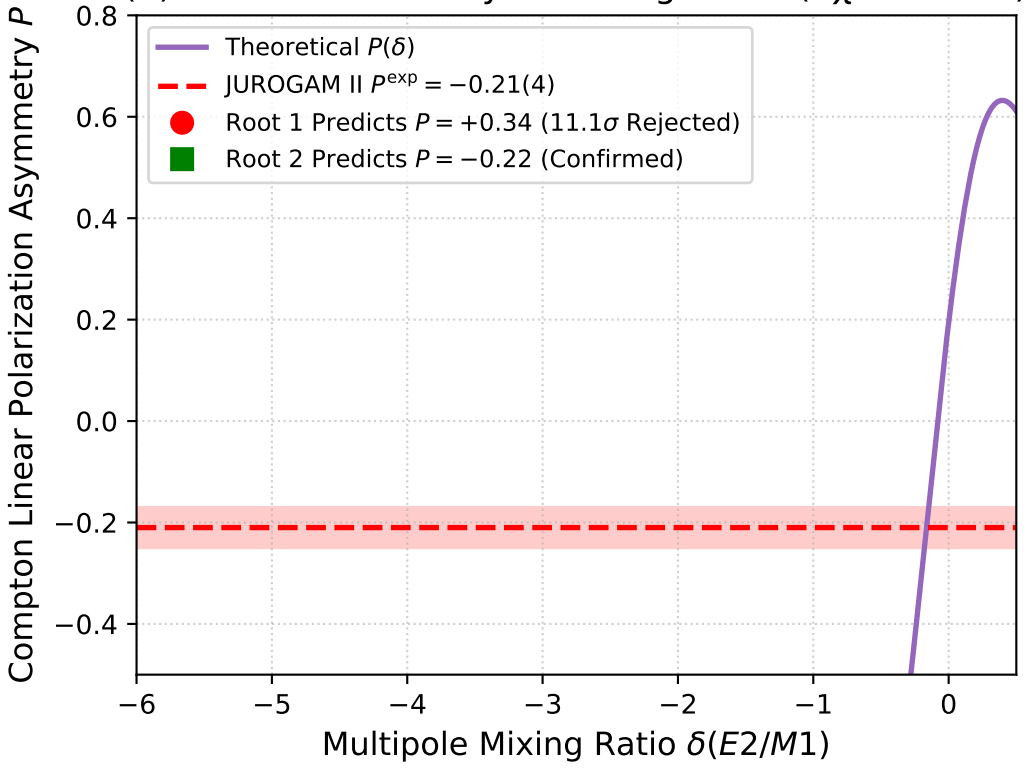
(a) Directional Distribution Dual Roots in ^{135}Pr
Angular Distribution Coefficient a_2
Multipole Mixing Ratio $\delta(E2/M1)$
Theoretical $a_2(\delta)$
Gammasphere $a_2^{\exp} = -0.42(3)$
Root 1: $\delta_1 = -1.83$ (Wobbling)
Root 2: $\delta_2 = -0.47$ (TiP Partner)



(b) Linear Polarimetry Disambiguation ($\Delta\chi^2 = 122.3$)
Compton Linear Polarization Asymmetry P
Multipole Mixing Ratio $\delta(E2/M1)$
Theoretical $P(\delta)$
JUROGAM II $P^{\exp} = -0.21(4)$
Root 1 Predicts $P = +0.34$ (11.1σ Rejected)
Root 2 Predicts $P = -0.22$ (Confirmed)
